All prices in the table below are marketing year average (MYA) prices which do not include allowances or adjustments or commodities under government loan at the end of the marketing year, commodities forfeited to the Commodity Credit Corporation, loan deficiency payments, direct and counter cyclical payments, or disaster payments. In the following table, the MYA price for most crops are computed by weighting monthly prices by the monthly percentages or total sales during their marketing year. For sweet potatoes and pecans, the MYA prices are based on annual surveys. Value of production is computed by multiplying the price by its

production for the crop year. These estimates should not be confused with cash receipts, which relate to sales during the calendar year irrespective of the year of production.
